WHO CAN DRY NEEDLE & WHAT DOES THEIR TRAINING LOOK LIKE?

In many states, many medical providers have the legal right to perform dry needling treatment, including Physical (PT) and occupational therapists (OT), chiropractors (DC), and Physicians.

PT, OT and DCs have attended **6-8 years of higher education** to study the function of the human body and its anatomy.

In order to practice dry needling our clinicians participated in continuing education course work that provided them the advanced knowledge and psychomotor skills required to safely and effectively deliver dry needle treatment to our patients.
